Introduction

The Credit Card Approval Prediction System is designed to assist banks and financial institutions in making faster and more accurate credit card approval decisions. The system analyzes applicant information such as income, employment status, education, family status, housing type, and credit history using machine learning techniques to predict whether a credit card application is likely to be approved or rejected.

Empathy map

THINKS

- Need accurate approval decisions.
- Reduce financial risk.
- Improve customer satisfaction.
- Speed up the approval process.

SAYS

- Manual verification takes too much time.
- We need a faster approval system.
- Accuracy is important.
- Automation can improve efficiency.

FEELS

- Overloaded with many applications.
- Concerned about human errors.
- Responsible for making correct decisions.
- Wants a reliable prediction system.

DOES

- Reviews applicant information.
- Checks income and employment details.
- Verifies credit history.
- Approves or rejects applications.

Bottom Section

- **Pain Points:** Manual processing, delays, inconsistent decisions, human error.
- **Needs:** Fast approval, accurate predictions, automation, consistent decision-making.

Design Style

- Modern flat design
- Blue and white banking theme
- Icons for thinking, speaking, feeling, and doing
- Professional presentation suitable for a final-year machine learning project
- High resolution (16:9)
